

AC Dimmable Constant Voltage LED power supply 100W

DDS738 è un alimentatore per Led con uscita a tensione costante, dimmerabile sulla alimentazione 230Vac, tramite Dimmer IGBT o TRIAC.

Questo modulo a tensione costante genera un segnale PWM per alimentare strisce led o moduli led che possono essere alimentati a tensione. La luminosità è regolata in corrispondenza della regolazione dell'angolo di fase di alimentazione in ingresso.

Il vantaggio applicativo di questo alimentatore è che non necessita di un controllo 0/10vdc per regolare la luminosità dei led, con conseguente semplificazione del cablaggio. La tensione in ingresso di lavoro è 230Vac o 350VDC, per una massima tollerata AC di 240.

La tensione costante può essere 12Vdc o 24Vdc a scelta in fase di ordine.

Questo alimentatore è SELV con doppio isolamento rinforzato, protetto dal corto circuito intrinsecamente.

Morsettiere per cavi di 2.5 mm

DDS738 it is a Dimmable power supply for strip LED.

The dimming is cut phase mode leading edge or trailing edge. IGBT dimmer are recommended for low noise application.

Dimming the VAC power supply a PWM out is generated, from 100% up to 5% following the cut phase input.

This help to save 0-10Vdc controller, wiring and space, just dimmer the input power supply and output will generate PWM.

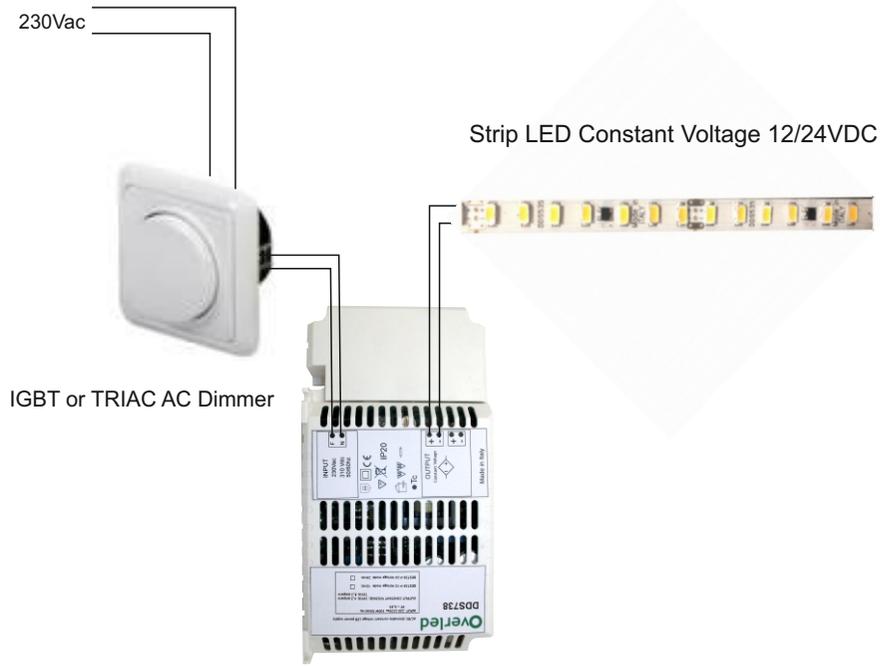

The output can be 12Vdc or 24Vdc in constant voltage mode.

This power supply is SELV double insulated, short circuit protection, and it can be supplied in AC or DC input voltage, see table for the value.

Connector for 2.5mm cable gauge in output and input.
